Specific target organ toxicity (STOT):

This product contains airborne quartz powder as impurity and is therefore classified as STOT RE1 according to EG Regulation 1272/2008.

Additional toxicological information:

Frequent or repeated inhalation of airborne quartz powder (crystalline silicate) can cause silicosis.

The IARC (International Agency for Research on Cancer) notes that crystalline SiO₂ which is inhaled at the working place can cause pulmonary cancer.

However, they further note that it does not apply for all working places and not all types of crystalline SiO₂ (IARC-Monographs, 1997, Vol. 68).

In June 2003 the SCOEL (EU Scientific Committee on Occupational Exposure Limits) came to the conclusion that silicosis is the major effect of inhaling respirable crystalline silicon dioxide.

Persons who already are suffering from silicosis have a higher cancer risk. The symptoms of silicosis are coughing and breathlessness. The dust level should be measured and controlled

continuously.

It can therefore be concluded that the risk of cancer can be reduced by avoiding silicosis (SCOEL SUM Doc 1994-final, June 2003).

The dust level should be measured and controlled continuously.
