

97505 Skin Paste

Skin Paste is a RTV silicone for two-component - addition curing silicone that vulcanizes at room temperature.

Because it has a paste-like, firm consistency, it is particularly suitable for vertical molding, mask making and detailed body molding and special effects. Skin does not contain any substances classified as hazardous.

Suitable for direct application to the skin!

Applications

- Art reproduction
- Body molding, mask making because of detailed molding
- special effects

Properties

Mixing ratio

Component A (975051) : B (975052): 1:1

Viscosity (mPa.s): > 50,000

Elongation at break: 280 ± 20%

Working time at 23°C: 6 min

Setting time (23°C): 15 min -20 min

Hardness Shore after 24 hours: 40 ± 2

Color after curing: Pink/skin color

Storage:

Skin Paste should be stored between 5°C and 27°C. Close the bottles after use and do not interchange the lids of base and catalyst
