

23178 - 23182 Irgazine® Pigments

Because of growing concern about possible health hazards related to the use of cadmium pigments in the coatings industry, chemical companies have long sought after a possible organic substitute.

This new line of DPP (which stands for Di-Keto-Pyrrolo-Pyrrol) pigments fits the ticket in the red spectrum, being much more opaque than other organic pigments and having at the same time excellent light-fastness and stability in all binders.

Except for 23179 Scarlet DPP, which is slightly granular and has to be broken in the mixing process, all are easy to mix and produce a brilliant, smooth paste that readily accepts any fillers or extenders.

23178 Irgazine Orange DPP RA C.I. Number: Pigment Orange 73

23179 Irgazine Scarlet DPP EK opaque C.I. Number: Pigment Red 255

23180 Irgazine Red DPP BO C.I. Number: Pigment Red 254

23182 Irgazine Ruby DPP TR C.I. Number: Pigment Red 264
